WORK EXPERIENCE:

OpenText - AI Engineer **December 2025 - Present**

- Built a production-grade breaking change intelligence platform that **extracts insights** from **unstructured release artifacts** (changelogs, release notes) to automatically detect backward-incompatible changes and proactively prevent failures.
- Designed and implemented an **agentic reachability analysis engine** that **autonomously selects** ecosystem-specific analysis strategies, orchestrates call-graph generation tools, performs CVE symbol tracing, and determines vulnerability reachability in customer codebases.
- Resolved **Kubernetes pod failures** and deployment issues in production environments, improving service stability and reducing operational downtime.

Solytics Partners - Software Engineer **August 2023 - November 2025**

- Developed backend of **MRM Vault**, a Model Risk Governance & Inventory Management platform used by 20+ global banks, ensuring scalability, security, and regulatory compliance.
- Built workflows for **unstructured data** ingestion (model documents, metadata) using **Python**, **Elasticsearch**, and **RAG pipelines**.
- Built a **Generative AI chatbot** using RAG + LLMs to query model metadata and documents, achieving 80%+ answer accuracy.
- Designed an **AI-powered text-to-workflow engine** converting natural language business processes into executable workflows with auto-generated nodes, edges, and role assignments.
- Developed an **automated compliance-checking module** analyzing model **metadata** and **artifacts** against new/updated regulations using rule-based and AI-driven matching.
- Implemented **OAuth 2.0** for secure API authentication, maintaining zero data breaches and industry security compliance.
- Improved cloud scalability and reliability by 40% using **Docker**, **Kubernetes**, and **Jenkins**-based **CI/CD** automation.
- Integrated **Neo4j**, modeling 1,000+ entities to accelerate nested queries and enhance relationship visualization for models, validations, and findings.
- Accelerated data retrieval by 50% by integrating **Elasticsearch** as a secondary database and optimizing search performance.
- Reduced incident response time by 70% by implementing **Logstash** for centralized logging and faster debugging.
- Automated document and email generation using **Jinja**, producing 200+ daily emails and 40+ documents.
- Resolved **90+ Jira tickets** by debugging and optimizing APIs, improving system performance and reliability.

TechVerse Solutions - Software Development Intern **May 2022 - January 2023**

- Created a **Django**-based Student Management System, improving operational efficiency by 50% through optimized data processing and automation.
- Strengthened system security by implementing **JWT authentication**, achieving zero data breaches.

TECHNICAL SKILLS:

- **Languages:** Python, C++, SQL
- **Backend:** REST APIs, JWT, OAuth, GraphQL, WebSocket, Microservices
- **DevOps:** Docker, Kubernetes, Jenkins, AWS (S3, EC2), CI/CD, Prometheus
- **Database:** PostgreSQL, MySQL, Elasticsearch, Neo4j, Milvus, Arango
- **AI/ML:** LLMs (GPT, Llama2, Claude), Langchain, RAG, Vector Search, TensorFlow
- **Tools:** GitHub, Jira, Postman, Logstash, Kibana
- **Concepts:** Distributed systems, OOPs, Design patterns, SDLC, Agile/Scrum

PROJECTS:

LinkLens: User Behavior Graph Recommendation System (Project Link) **April 2025**

- **Architected** a **Neo4j-powered graph backend** to model user-entity interactions (nodes/edges), enabling **15% faster relationship traversal** vs. SQL.
- **Developed GenAI-driven APIs** using LangChain and GPT-4, delivering personalized recommendations with **90% accuracy** (user testing).
- **Engineered dynamic CRUD APIs** to manage graph data, **reducing manual admin tasks by 30%**.
- **Implemented centralized logging** (Logstash + Elasticsearch/Kibana), cutting debug time by **40%** via real-time query monitoring.

QueryBaseAI: AI-Powered Hybrid Search Engine (Project Link) **February 2025**

- **Built a scalable hybrid search engine** combining Elasticsearch (keyword) and Milvus (vector similarity), improving recall by **35%** over single-mode search.
- **Integrated RAG pipelines** (OpenAI/AI21) to generate context-aware answers, reducing **hallucination rates by 20%**.
- **Designed modular REST APIs** for indexing/querying, supporting **5K+ concurrent requests** (locust-tested).
- **Containerized with Docker** for smooth deployment.
- **Enabled multi-tenancy** via database partitioning, isolating client data while maintaining **sub-100ms latency**.

EDUCATION:

Vellore Institute of Technology **September 2022 - May 2024**
Master of Computer Application | CGPA: 8.64 Vellore, Tamil Nadu

Atal Bihari Vajpayee University (UTD) **May 2019 - May 2022**
Bachelor of Computer Science (Honours) | CGPA: 8.20 Bilaspur, Chhattisgarh
